

# THE LIBYAN INITIATIVE FOR THE REVERSAL OF GLOBAL WARMING

15-300GW power plants- 24 located east of the Red Sea and 61 west of it, to provide the global energy needs in 2026/27

**The global power plant site**

21 TW is the energy rate of this plant in 2021

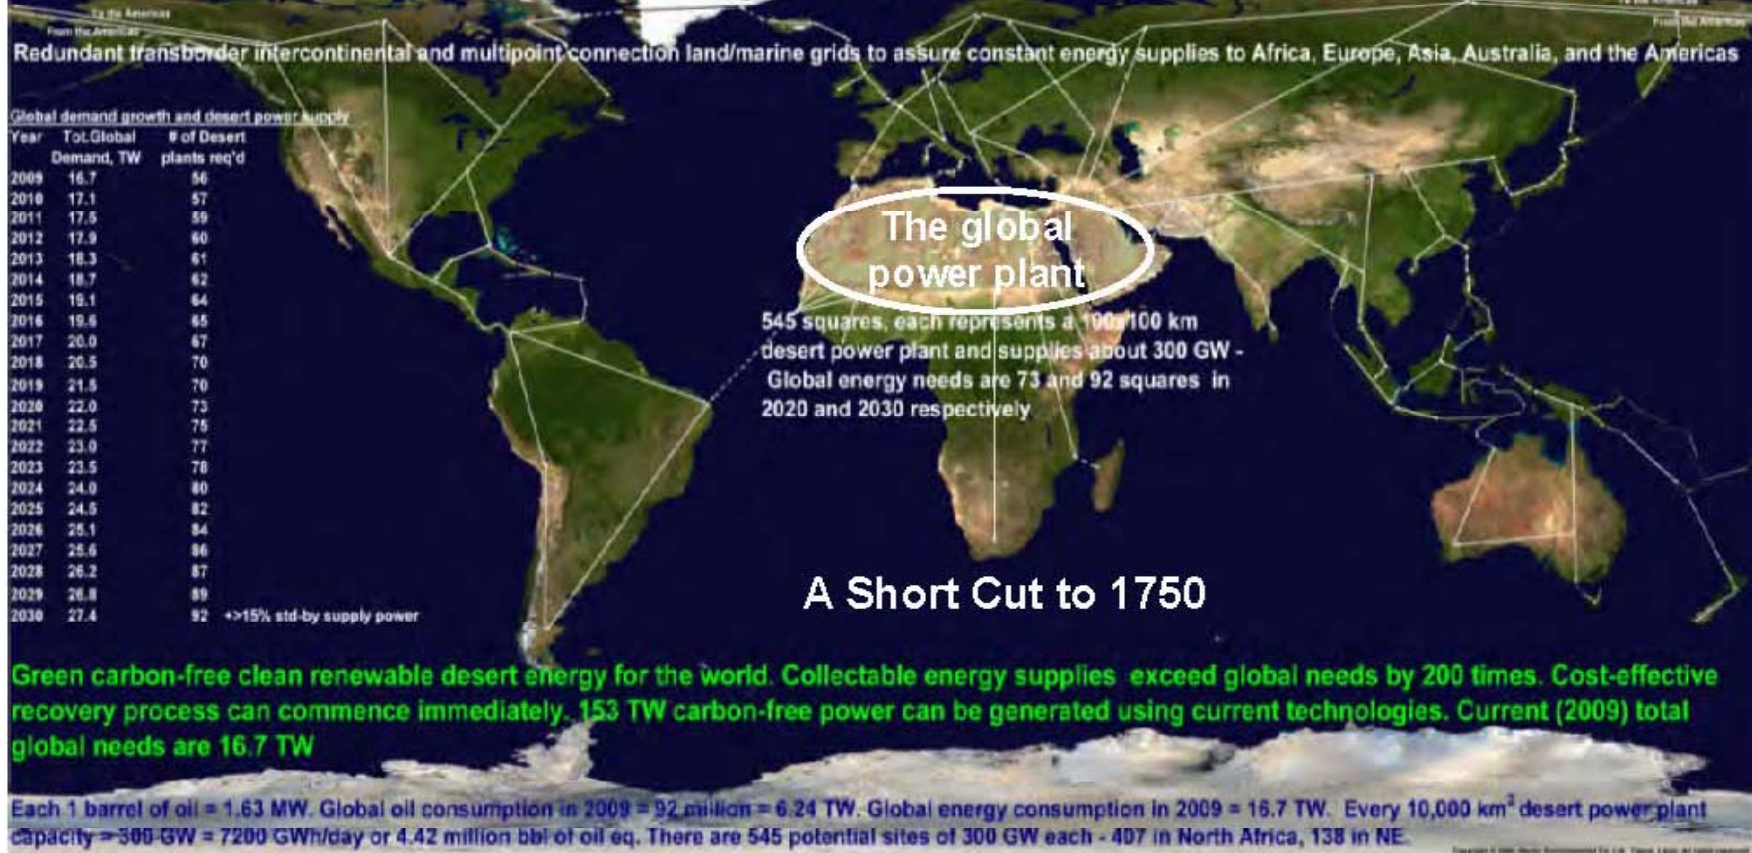

■ A 300-GW cluster of permanent low pressure round the clock wind generating zones

The plants will dispatch power via super smart transmission grids through several gateways to reach every consumer on the globe

The low pressure zone (LPZ) plants will be a total and complete replacement to carbon fuel and nuclear energy by 2020 if the Libyan Initiative is adopted collectively executed by the global community.

→ Gateways for the global dispatch of the LPZ carbon free energy

**2009 - THE ROAD BACK TO 1750 - TO A CO<sub>2</sub> LEVEL OF 280 PPM -THE NATURAL LEVEL  
Trans-World Renewable Energy Project to Supply The Total Global Needs of C-Free Energy**

**Energy will be transmitted to global consumers through about 8 gateways:**

1. Africa, 2. India and SE Asia, Australia and the Pacific, 3. China and Japan, 4. Central Asia, Siberia, Alaska, 5. Caucasia, Russia, Scandinavia, 6. Eastern Europe, 7. Western Europe, Iceland, North America, 8. South America. All gateways are interconnect to provide high redundancy: Australia is fed through gateways 2, 3, 4; The Americas through 3,4,7, 8.

*Please support the Initiative !!!!*
